Education

University of Connecticut

Bachelor of Science in Computer Science, GPA: 4.0/4.0

Storrs, CT

May 2028

Awards: Dean's List Scholar, Presidential Scholar, Honors Program Scholar, High School Valedictorian

Coursework: Calc I, II, III, Linear Algebra, Discrete Systems, Data Structures and Algorithms, Cybersecurity Lab, Algorithms and Complexity, Systems programming, Probability

Work Experience

SecureKart

May 2026 - Aug 2026

Computer Engineering Intern

Rocky Hill, CT

- Developed a custom application to sync AD configuration and user data over low bandwidth connections without loss.
- Configured servers using RAID arrays, Windows Server Data Center Edition, and Active Directory (AD).
- Built and deployed portable datacenter units for small businesses with HIPAA compliance for healthcare related businesses.
- Configured VMs with Hyperv-V to run Active Directory domain services, DHCP, DNS, and our custom software.

Metropolitan District Commission

July 2023 - Aug 2023

Intern

Hartford, CT

- Was a part of a team, installing and configuring new phone system for headquarters office
- Digitized physical records into cloud database
- Reviewed GIS data for storm drain cleaning records

Uconn Summer Bridge Program

June 2025 - August 2025

Student

Storrs, CT

- Took prep courses for the fall semester over the five-week program
- Went on tours of engineering companies such as The Cigna Group, Medtronic, Synchrony
- Developing professional and academic skills through faculty speakers.

Extracurriculars

The Husky Quantitative Group

December 2025 - Present

- Discovered/created statistical edges through math, statistics, and alternative data streams
- Wrote algorithmic trading strategies to capture areas of alpha in financial markets
- Trained machine learning models on financial market data to use in trading
- Networked and connected with industry professionals to raise trading capital

Projects

Akuna Capital Virtual Trading Competition

Created a market making algorithm for a binary options market to compete in the Akuna Capital trading competition.

- Quote prices for binary options based on current holdings, the days until expiry, strike price, and the underlying.
- Respond to fill or kill orders with a given price and quantity depending on the market conditions.
- Manage holdings of options, expirations, and filling liquidity demand while avoiding bankruptcy.

Analysis of Usage Patterns at UConn's Recreation Center

Collecting data on the occupancy at our recreation center and analyzing how students use it.

- Created a web scraper and set up a server to run the web scraper and store the data
- Wrote a data pipeline to clean, filter, and standardize the data
- Visualized data to support hypotheses on the trends among student body usage

Markov Chain Text Prediction

Build a Markov Chain encoding the probabilities of a given word following the current word and generate text through a random walk through the graph.

- Parse large amounts of text recording word and punctuation frequency
- Calculate probability relationships between words following each other
- Generate large amounts of random text by a random walk through the Markov Chain

Skills

Languages: Python, C, Java, Bash, Powershell, Rust, HTML/CSS, Typst

Tools: Linux, Git/Github, Make, Maven, Cargo, Excel, Onshape (CAD software), Minitab

Libraries: PyTorch, NumPy, Pandas, Processing, xgboost, cvxpy
