Education

University of Connecticut

Bachelor of Science in Computer Science, GPA: 4.0/4.0

Storrs, CT

May 2028

Awards: Dean's List Scholar, Presidential Scholar, Honors Program Scholar, High School Valedictorian

Coursework: Calc I, II, III, Linear Algebra, Discrete Systems, Data Structures and Algorithms, Cybersecurity Lab, Macroeconomics, Microeconomics

Work Experience

SecureKart

Computer Engineering Intern

May 2026 - Present

Rocky Hill, CT

- Developed a custom application to sync AD configuration and user data over low bandwidth connections without loss.
- Configured servers using RAID arrays, Windows Server Data Center Edition, and Active Directory (AD).
- Built and deployed portable datacenter units for small businesses with HIPAA compliance for healthcare related businesses.
- Configured VMs with Hyperv-V to run Active Directory domain services, DHCP, DNS, and our custom software.

Metropolitan District Commission

Intern

July 2023

Hartford, CT

- Was a part of a team, installing and configuring new phone system for headquarters office
- Digitized physical records into cloud database
- Reviewed GIS data for storm drain cleaning records

Uconn Summer Bridge Program

Student

June 2025 - August 2025

Storrs, CT

- Took prep courses for the fall semester over the five-week program
- Went on tours of engineering companies such as The Cigna Group, Medtronic, Synchrony
- Developing professional and academic skills through faculty speakers.

Extracurriculars

The Husky Quantitative Group

December 2025 - Present

- Discovered/created statistical edges through math, statistics, and alternative data streams
- Wrote algorithmic trading strategies to capture areas of alpha in financial markets
- Trained machine learning models on financial market data to use in trading
- Networked and connected with industry professionals to raise trading capital

Robotics Team

August 2021 - July 2025

- Won the 2024 robotics state championship and were finalists at the 2025 robotics state championship
- Doubled the size of the team both years through greater community involvement and outreach
- Coded and wired the whole robot during the building phase and drove the robot during the competitions
- Mediated communication between the different departments while building the robot and ensured the robot remained on schedule to be done by competition

Projects

Analysis of Usage Patterns at UConn's Recreation Center

Collecting data on the occupancy at our recreation center and analyzing how students use it.

- Created a web scraper and set up a server to run the web scraper and store the data
- Wrote a data pipeline to clean, filter, and standardize the data
- Visualized data to support hypotheses on the trends among student body usage

Neural Network Playing Poker

Without prebuilt machine learning libraries, the AI learned to play a version of Texas Hold'em Poker.

- Created a linear algebra library for machine learning
- Created the neural network architecture with the python standard library
- Created a genetic based training algorithm with scores defined by a fitness function

Skills

Languages: Python, Java, Bash, Powershell, Rust, HTML/CSS, Typst

Tools: Linux, Git/Github, Make, Maven, Cargo, Excel, Onshape (CAD software), Minitab

Libraries: PyTorch, NumPy, Pandas, Processing, xgboost, cvxpy
